Asghar Hussain

AI Intern • Software Engineering Student (IUB) • ML/DL & Generative AI Enthusiast • Building healthcare & vision ML apps
Bahawalpur, Punjab, Pakistan

Summary

I'm Asghar — a software engineering student and AI intern focused on building production-grade machine learning systems that combine strong mathematical foundations with practical engineering. My work spans computer vision (detection & segmentation), healthcare ML pipelines, and end-to-end full-stack ML apps (React frontends, Python backends, SQL databases, model serving).

Recent highlights:

Developed a fruit ripeness classifier (ResNet → ONNX) and deployed with a Streamlit dashboard + YOLO segmentation pipeline.

Built a deep learning pipeline for cow disease detection (COCO formatted dataset; train/val/test split).

Created a facial expression detection bot (PyTorch .pt model, OpenCV webcam integration, Streamlit UI).

Designed a disease prediction & health recommendation web app (React frontend, Node/Flask backend, logistic regression & model serving).

Completed AI/ML/DL/NLP coursework; experienced with PyTorch, TensorFlow, ONNX, scikit-learn, OpenCV, FastAPI/Flask, React.

My aim: bring rigorous math + system design to build reliable AI products for healthcare and low-resource languages (working on a Romanized Balti LLM). Open to collaborations, internships, and research on interpretable ML and model deployment.

Experience

DeepEmbed Lab IUB

AI Intern — CAI 2.0

November 2024 - August 2025 (10 months)

Islamia University Bahawalpur

Artificial Intelligence Course — DeepEmbed Lab, The Islamia University of Bahawalpur (IUB)

Duration: 8 Months | Institute: DeepEmbed Lab, IUB | Instructor: [Add if you want]

Focus: End-to-End AI Foundation — From Mathematical Core to Real-World Applications

Overview

This 8-month intensive program at DeepEmbed Lab, IUB provided a complete, research-oriented learning path in Artificial Intelligence — combining strong mathematical grounding, hands-on projects, and modern AI tools.

The course was structured to move progressively from Python and mathematics fundamentals to Machine Learning, Deep Learning, Computer Vision, NLP, and Generative AI — enabling me to build production-ready AI systems with real datasets and models.

Phase 1: Python Foundations for AI

Phase 2: Mathematical Core for AI

Phase 3: Machine Learning

Phase 4: Deep Learning Fundamentals

Phase 5: Computer Vision (with Roboflow Projects)

Phase 6: Natural Language Processing (NLP)

Phase 7: Generative AI & Automation

Outcome & Skills Gained

By the end of the course, I gained expertise across the full AI stack:

Core Skills:

Python, NumPy, Pandas, Matplotlib, Scikit-learn, PyTorch, TensorFlow

Linear Algebra, Calculus, Probability, and Statistics for AI

ML Algorithms, Model Tuning, and Evaluation

Deep Learning, CNNs, Transfer Learning

Computer Vision (YOLO, Roboflow, ONNX)
NLP & Transformers (Hugging Face, BERT, GPT, Tokenization)
Generative AI, Prompt Engineering, Automation (N8N)
Project Deployment (Streamlit, Flask, FastAPI)

The AI Course at DeepEmbed Lab (IUB) transformed my understanding of Artificial Intelligence from theoretical math to applied systems engineering. It built the foundation for my later work in healthcare AI, computer vision, language modeling, and Generative AI research. It also shaped my philosophy as an upcoming AI scientist — to bridge the gap between rigorous mathematics and real-world problem-solving through intelligent, deployable AI systems.

AI Cademy

AI Intern — AI Cademy

November 2024 - February 2025 (4 months)

Bahawalpur, Punjab, Pakistan

During my internship at AI Cademy, I explored advanced concepts and real-world applications of Artificial Intelligence, including Space Exploration, Astrobiology, Evolutionary Biology, and Advanced AI. I developed a solid foundation in AI theory and hands-on implementation while contributing to innovative projects focused on using AI for scientific and analytical challenges.

Notable Projects

Predicting Hemolytic Disease of Incompatibility (Mother & Baby) – Designed a predictive AI model for detecting compatibility-based diseases.

Artificial Neural Network (ANN) from Scratch – Implemented a neural network to understand backpropagation and learning mechanisms.

Understanding Human Evolution – Pattern Recognition – Applied AI-based pattern recognition to analyze evolutionary trends.

Skills Gained

Python · Machine Learning · Deep Learning · Problem Solving · Idea Hunting

Enigmatix

Backend Intern

January 2024 - July 2024 (7 months)

Bahawalpur, Punjab, Pakistan

I have learn the python here and after enrollement in other course i left the organization.

Education

The Islamia University of Bahawalpur

Bachelor of Science - BS, Computer Software Engineering · (2023)
